1. Introduction

Amateur radio (or “ham radio”) uses radio frequency spectrum in the LF, MF, HF, VHF and UHF bands for a variety of non-commercial communications including private recreation and emergency support. In this report, Comsearch identified amateur licenses located in the vicinity of the proposed Hoffman Falls Wind Project in Madison County, New York (the Project) that could potentially be affected by the Project. The Project area of interest is defined as the rectangular area with a minimum of a 2-mile buffer from all turbine locations as noted in Figure 1.

2. Summary of Results

Comsearch found nineteen FCC database records¹ for amateur licenses in the vicinity of the Project, as shown in Table 1 and Figure 1. Our search was performed by geocoding the street address of each amateur licensee, after performing an initial cull using the zip code of the licensee. There are seven zip codes in the vicinity of the Project: 13035, 13061, 13310, 13334, 13408, 13409, and 13032.

Call Sign	Operator Name	Address	FCC Expiration Date	Operator Class	Distance to Closest Turbine (km)
KD2WBV	Anderson, John A	4621 State Route 20	3/30/2031	Technician	0.44
KC2RRA	MC LAUGHLIN, GARY D	RD 1 TIMBERTOP 5056 BUYEA RD	6/1/2027	Technician	1.28
W2WFJ	JONES Mr, WARREN F	4051Argos Rd.	5/29/2030	General	1.44
K8RWO	Caretti Mr., Jerome C	2 Brookside Dr	10/26/2031	General	1.89
KB2WEP	RIGGALL, ROSEMARY W	CAVALIER APTS APT 2 CAVALIER DR	11/3/2025	Technician	2.11
KD2VCI	PUUKILA, NOAH R	3038 BINGLEY ROAD	11/23/2030	Technician	2.74
KD2VCJ	STOKER, JENNIFER A	3038 BINGLEY ROAD	11/23/2030	Technician	2.74
KD2VDB	STOKER, JOHN T	3038 BINGLEY ROAD	11/23/2030	Technician	2.74
W2ZXN	HARMON-KIMBALL, ANDREW L	5801 Oxbow Rd	7/3/2027	General	2.78
N2MBZ	KIMBALL, AARON J	5801 Oxbow Rd	12/28/2031	General	2.78
N2MBZ	KIMBALL, AARON J	5801 Oxbow Rd	12/28/2031	Advanced	2.78
N2OMU	BERGMAN, JODY P	2776 RTE 20 EAST	12/29/2031	General	4.41
N2FIR	MARRIAM, GREGORY L	3291 EATON ROAD	3/18/2024	General	4.43
N2FIR	MARRIAM, GREGORY L	3291 EATON ROAD	3/18/2024	Technician	4.43
WA2PNW	Marriam, Karen J	3291 Eaton Rd	9/24/2031	Technician	4.43
WA2PNW	Marriam, Karen J	3291 Eaton Rd	9/24/2031	General	4.43
WA2DTN	MARRIAM, SCOTT L	3291 EATON RD	1/23/2030	Advanced	4.43
WA2DTN	MARRIAM, SCOTT L	3291 EATON RD	1/23/2030	Amateur Extra	4.43

¹ Comsearch makes no warranty as to the accuracy of the data included in this report beyond the date of the report. The data presented in this report is derived from the amateur license holder’s FCC license and governed by Comsearch’s data license notification and agreement located at http://www.comsearch.com/files/data_license.pdf.

Call Sign	Operator Name	Address	FCC Expiration Date	Operator Class	Distance to Closest Turbine (km)
KD2TBV	RICHARDS, CHRISTOPHER P	3291 EATON RD	11/26/2029	Technician	4.43

Table 1: Amateur Radio Licenses

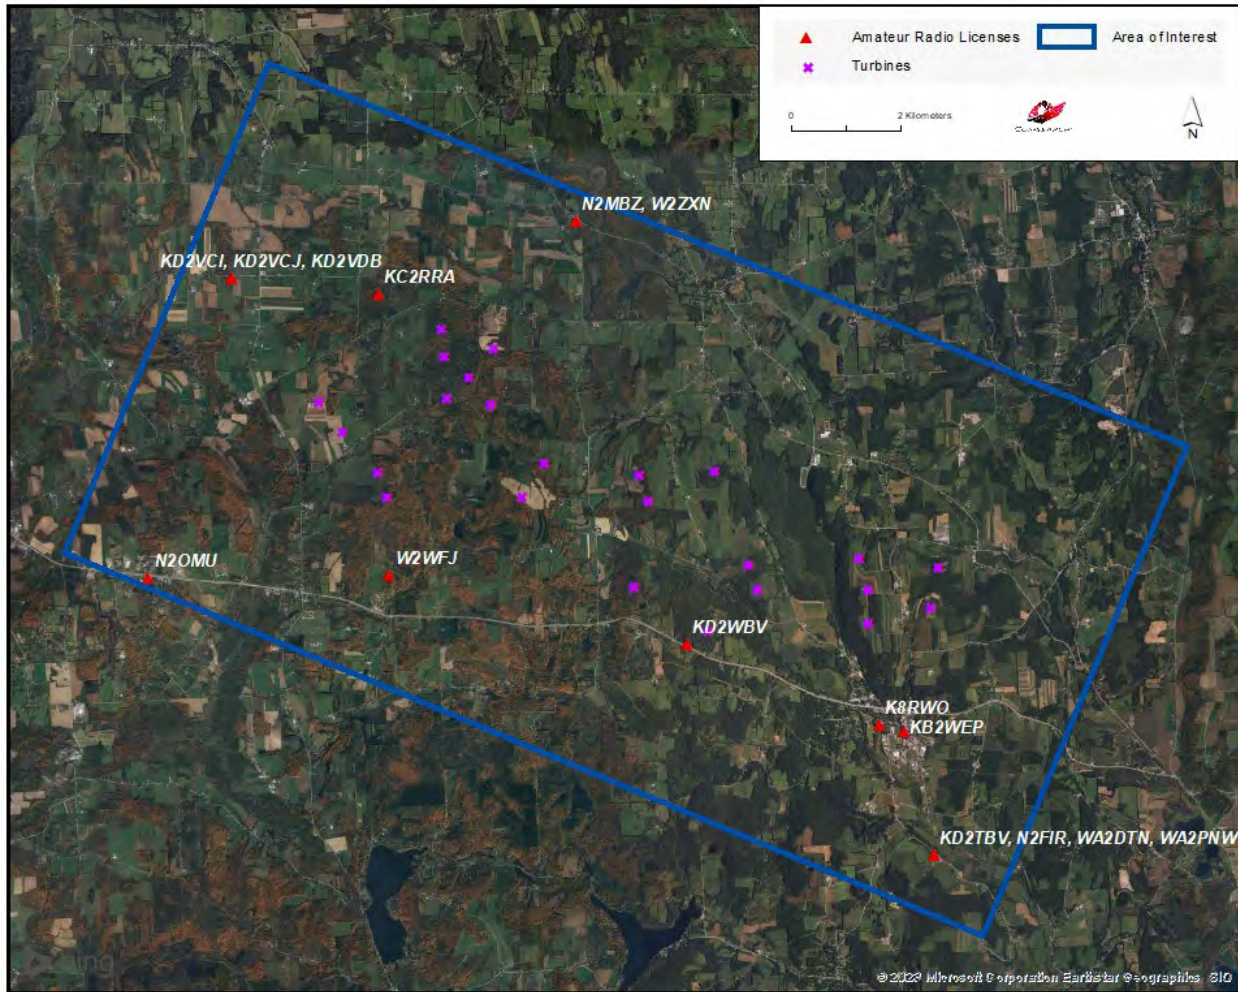

Figure 1: Plot of Amateur Licenses Geocoded by Street Address (Excluding PO Boxes)

Eight additional active licenses were found with a Post Office Box address in an overlapping zip code (see Table 2 below).

Call Sign	Operator Name	Address	FCC Expiration Date	Operator Class
KD2APA	Pierce, Tyrone C	PO Box 122	08/09/2031	Technician
N2DO	OSTRANDER, DON R	PO Box 268	02/12/2028	Amateur Extra
N2DO	OSTRANDER, DON R	PO Box 268	02/12/2028	Amateur Extra
WB2ULV	AICHLER, CHARLES R	PO Box 537	03/17/2022	Advanced
KD2IDL	Episcopo, Brandon A	PO Box 542	03/06/2025	Technician
N2MAE	EPISCOPO, MATTHEW A	PO Box 542	04/03/2025	General
N2MAE	EPISCOPO, MATTHEW A	PO Box 542	04/03/2025	Technician
KC2UEH	VREELAND, MICHAEL W	PO Box 78	11/17/2028	Technician

3. Impact Assessment

Amateur radio systems are typically unaffected by the presence of wind turbines, and we do not anticipate any significant harmful effect to their operations in the vicinity of the Project. Although each licensee operates in different frequency ranges using various modes of communication including phone, image and data signaling, there is commonality among these systems with regard to the impact of wind turbines on their operation. Radio wave signals in the US Amateur Radio Bands (i.e., LF, MF, HF, VHF and UHF bands) have long wavelengths which enables them to pass through and around objects such as wind turbine towers and blades.

Furthermore, the frequencies on which these systems operate enable amateurs to transmit and receive signals that propagate large distances despite being in a non-line-of-sight (NLOS) environment. In the LF and MF bands (30 – 3,000 kHz), radio waves propagate by interacting with the Earth’s conductive surface, thereby following its curvature and propagating through rugged terrain and over the horizon. This is referred to as “groundwave” propagation. In the HF band (3 – 30 MHz), radio waves use the upper region of the atmosphere known as the “ionosphere” as a reflector back to Earth and thereby extend beyond the horizon. This is referred to as “skywave” propagation which is made possible by the layers of charged particles in the upper atmosphere that cause radio waves to change direction as they propagate back towards the Earth. In the VHF and UHF bands for US amateur radio (50 – 225 MHz and 420 – 1300 MHz, respectively), radio waves can propagation large distances by means of refraction

due to the lower region of the atmosphere known as the “troposphere” which has a refraction index that changes as a function of temperature and air pressure.

Therefore, based on these wave characteristics and propagation of signals used for amateur radio communications in the above frequency bands, we do not anticipate any significant harmful effect to their operation by the proposed wind turbines in the Hoffman Falls project area.
